Subject: RE: Remote Water Monitoring Solution for Animas River/ Gold King

Shaun,

Thanks for the reply. If long term continuous monitoring is required for the affected rivers, I believe we are the only firm in the nation offering this type of monitoring electronically on a near real time basis. I understand that manual samples can be taken periodically but that is very labor intensive and can only give you an indication of quality for a specific time. If you could provide me with the proper contact person in your organization, I would be glad to spend some time with them explaining our capabilities in more detail.

I wish you the very best during this difficult time.

Regards,
BJ

We have been working for over a year here in the Appalachian coal basin to help companies to remotely monitor their water outfalls for compliance in real time. I am offering these services as a concerned citizen and could be onsite ready for the deployment of monitoring within days. I have attached a short primer detailing our monitoring capabilities. Please feel free to call me directly on my mobile phone to discuss this at [Personal Phone/Ex. 6]
